PROJECTS

Puri - Order Management System [[GitHub](#)] [[Demo](#)] Feb 2023–Jun 2023
Puri is an Order Management System developed for a logistics company in Semarang. The application successfully transformed the customer order processing workflow, replacing the outdated physical whiteboard-based system with a modern web-based solution. This transition enabled real-time data display and push notifications, facilitating seamless coordination between the sales and logistics divisions. The main technologies used include React.js, Firebase, Chakra UI, and Progressive Web App (PWA).

Personal Website [[GitHub](#)] Jul 2023–Present
This project serves as a personal platform where I share my learnings through blog posts and showcase my project portfolio. It is an opportunity for me to experiment with new technologies, design concepts, and content strategies. Built using Next.js, a powerful React.js framework, the project benefits from features like file-based routing, efficient data fetching, and various optimizations. Additionally, Tailwind CSS, a highly adaptable CSS framework is used, enabling greater customization and maintainability.
